In the pursuit of facilitating positive changes at grassroots through strong model of community engagement, AADHAAR An Association for Development, Harmony and Action Research (AADHAAR), a not-for-profit was established in the year 2011.

Our Reach

VISION

AADHAAR envisions an empowered, informed and just society.

MISSION

We support and strengthen grassroots action and engagement with civil society; advocate, and promote policies and institutions for sustainable development and inclusion of the marginalized.

Our Strategy

Area of Expertise

- Environment & Disaster Management
- Digital Skill Building & Vocational Training
- Education
- Governance and Institution Building

Environment & Disaster Management

Environment, Clean Water & Sanitation, and Disaster preparedness are the need of the hour for human existence and the same concern reflects in the Sustainable Development Goals (SDGs) as well. AADHAAR works on both climate change adaptation and mitigation strategies for building climate resilient institutions, communities, and supporting ecosystem.

Digital Skill Building & Vocational Training

The overall objective of the intervention is to ensure access to work for youth facing the risk of exclusion, who are NEET (not in education, employment or training), or people struggling with long term unemployment by bridging the skill gap in digital skilling in India.

We strive to digitally empower and facilitate industry oriented vocational training to the citizens from low-income communities so that they access opportunities for growth and well-being for self, family, and the community.

Education

Various policy measures taken in India in the past have resulted in tremendous gains in universalizing elementary education but much needs to be achieved in regards to quality education and students' achievement levels. The dropout percentage of the students belonging to poor families especially girls at higher levels much higher. It is imperative to create opportunities by giving additional support for quality education belonging to the students of poor families.

Governance and Institution Building

AADHAAR is promoting Local Self Governance Institutions-with the aim that each person should have an equal say in decision-making and equal opportunity to influence governance outcomes irrespective of their caste, class, gender and creed.

We are forming and strengthening community-based groups and institutions-federations for citizen-led developmental initiatives. We are also building capacity of elected representative for developing people centered programs as well in addition to monitoring and implementation.
